SUMMARY

Unity Game Developer with 2 years of professional experience building mobile games in Unity and C#. Builds gameplay systems, game UI and HUDs, card and progression systems, and integrates mobile services: Firebase Remote Config, Analytics and Crashlytics, Unity IAP, notifications and localization. Works with UniTask, DOTween and Addressables, optimizes for low-end mobile devices, and uses AI-assisted development with Claude Code. Computer Science graduate with a C++ and OpenGL graphics background.

EXPERIENCE

Game Developer, *Hooligan Games* Nov 2024 – Present

- Develop Double Strategy, a mobile game preparing for release, in a small team: core gameplay mechanics, player interactions and game progression.
- Implemented dynamic card behaviors, deck management and card upgrade systems for strategic gameplay and progression.
- Designed and built game UI in Unity: menus, HUDs, panels and interactive UI elements, animated with DOTween.
- Integrated Firebase Remote Config, Firebase Analytics, Firebase Crashlytics, Unity IAP (in-app purchases), mobile notifications and Unity Localization.
- Profiled and optimized performance for low-end mobile devices with the Unity Profiler; async game flow with UniTask and asset loading with Addressables.
- Built and tested mobile game prototypes (Save Money, Merge Brawlers, Aura Farmer) to validate game ideas quickly.
- Developed grid-based systems and mechanics for Fort Royal (unreleased).
- Represented the studio in publisher meetings, presenting game concepts, vision and design decisions to secure publishing partnerships.

Game Developer Intern, *Lost Panda Games* Jun 2021 – Nov 2021

- Developed a 3D third-person game with three levels in Unity and C#: player and camera movement, collectibles and win conditions.
- Designed and implemented the HUD and UI: main menu, pause menu and level transition screens.

PROJECTS

Unity Systems Library, *personal, in progress* 2026

- Designing a modular library of reusable Unity packages (core, mobile, desktop) shared by personal project templates, with one-way assembly boundaries and VContainer dependency injection. Core package and object pooling in place.

AI-Assisted Development Tooling, *Claude Code* 2026

- Built a Claude Code workflow for Unity: C# coding rules, code review, performance audit and GC allocation sweep agents, and a merge-conflict resolver for scenes and prefabs.
- Published PC Doctor (github.com/frttpc/pc-doctor): Claude Code skills that diagnose and repair Windows PCs, with dry runs and undo.

OpenGL Game, *Sabancı University* 2021

- Built a 3D game from scratch in C++ and OpenGL: collision detection, object and texture rendering, player and camera movement, using OOP and design patterns.

Ray Tracer, *Sabancı University* 2021

- Implemented a ray tracer with vector algebra and geometric computation to simulate light behavior, with antialiasing.

SKILLS

Languages: C#, C++

Unity: Unity (2D/3D), Game UI/UX, Gameplay Systems, UniTask, DOTween, Addressables, Unity IAP, Unity Localization, Mobile Notifications

Services: Firebase (Remote Config, Analytics, Crashlytics)

Performance: Unity Profiler, mobile optimization for low-end devices

Practices and tools: OOP, SOLID, Design Patterns, Debugging, Git, GitHub, Agile, JIRA, Trello, Claude Code

Currently learning: VContainer (Dependency Injection)

Also familiar with: JavaScript, TypeScript, Python, React, Django

EDUCATION

B.Sc. in Computer Science, *Sabancı University, Istanbul* 2016 – 2022

25% scholarship

LANGUAGES

Turkish (native), English (professional working proficiency)
